

```

```javascript
import axios from 'axios';
import axiosRetry from 'axios-retry';
axiosRetry(axios, {
 retries: 3, // Number of retry attempts
 retryDelay: (retryCount) => {
 return retryCount * 1000; // Exponential backoff: wait 1s, 2s, 3s, ...
 },
 retryCondition: (error) => {
 // Retry on network errors or 5xx responses
 return axiosRetry.isNetworkError(error) ||
 axiosRetry.isRetryableError(error) ||
 error.response.status >= 500;
 },
});
// Example usage of axios with retry logic
axios.get('https://api.example.com/data')
 .then(response => {
 console.log('Data:', response.data);
 })
 .catch(error => {
 console.error('Error fetching data:', error);
 });
```

```
