Dear [Recipient's Name],

Re: Referral for Evaluation and Management of Klebsiella Bacteremia

I am writing to refer [Patient's Name], a [Patient's Age] year-old [Male/Female] who was admitted to [Your Facility's Name] on [Admission Date] with a diagnosis of Klebsiella bacteremia. The patient presented with symptoms of [list symptoms, e.g., fever, chills, hypotension] and was found to have a [mention any relevant findings, e.g., elevated white blood cell count, abnormal imaging results].

Upon admission, blood cultures were obtained, which confirmed the presence of Klebsiella pneumoniae. The patient has been started on [list antibiotic treatment] and has been monitored closely for any signs of septic complications.

The current clinical status of the patient is as follows:

- Vital Signs: [Include current vitals]
- Laboratory Results: [Brief summary of key lab results]
- Current Medications: [List medications]
- Relevant Past Medical History: [Brief outline if applicable]

Given the potential complications associated with this infection and the need for specialized care, I believe that further evaluation and management by your team would be beneficial. Please find attached the patient's medical records and relevant laboratory findings for your review.

Should you require any additional information or clarification, please do not hesitate to contact me at [Your Phone Number] or [Your Email Address].

Thank you for your attention to this referral.

Sincerely,

[Your Name]
