

```
```python
import uuid
def format_uuid_to_letters(u):
 # Generate the UUID
 uuid_str = str(u)

 # Remove dashes and convert to lowercase
 formatted = uuid_str.replace("-", "").lower()

 # Create a letter sequence (e.g., by converting hex digits to letters)
 return ''.join(chr(ord('a') + int(char, 16)) for char in formatted)
Example usage
my_uuid = uuid.uuid4()
letter_sequence = format_uuid_to_letters(my_uuid)
print(letter_sequence)
```
```
