Dear [Patient's Name],

Re: Interpretation of Your White Blood Cell (WBC) Test Results

I hope this letter finds you well. I am writing to provide you with the interpretation of your recent WBC test results conducted on [Date of Test].

Your test results indicate a white blood cell count of [WBC Count] cells per microliter, which is [above/below/within] the normal reference range of [Normal Range]. This result can indicate several conditions, which I will outline below:

1. **\*\*Increased WBC Count (Leukocytosis)\*\***

Possible causes include:

- Infection
- Inflammation
- Stress
- Allergic reactions
- Bone marrow diseases

2. **\*\*Decreased WBC Count (Leukopenia)\*\***

Possible causes include:

- Viral infections
- Bone marrow disorders
- Autoimmune diseases
- Certain medications

Given your specific results, I recommend [any follow-up actions, further tests, or referrals if necessary]. It is important to discuss these findings in detail, and I would like to schedule a follow-up appointment to address any questions or concerns you may have.

Please feel free to reach out to my office at [Phone Number] or [Email Address] if you need immediate clarification or would like to set up an appointment.

Thank you for your attention to this matter.

Sincerely,

[Your Name]  
[Your Title/Position]  
[Your Institution/Organization]
