

```

```html
<template>
  <lightning-card title="Application Acknowledgment" icon-
name="utility:check">
    <div class="slds-m-around_medium">
      <h1 class="slds-text-heading_large">Thank You!</h1>
      <p class="slds-text-body_regular">
        Your application has been successfully submitted. We appreciate your
        interest.
      </p>
      <lightning-button variant="brand" label="Track Application"
onclick={handleTrackApplication}></lightning-button>
      <lightning-button variant="neutral" label="Home"
onclick={handleGoHome}></lightning-button>
    </div>
  </lightning-card>
</template>
```

```javascript
import { LightningElement } from 'lwc';
export default class ApplicationAcknowledgment extends LightningElement {
  handleTrackApplication() {
    // Logic to track application
  }
  handleGoHome() {
    // Logic to navigate to home
  }
}
```

```
